

Examples of Mongolia-related (Government backed-up) Projects DAS has previously handled.

Project 1: Central Asian Mine Supply

Dated from January 2008 - present

This is one of our major clients in Ulan Bator, Mongolia who imports drilling parts such as Drill Mud, Steel Pipes and other mining-related products from China to Mongolia on a regular basis by air transportation. Throughout 2008, DAS has provided our client with hands-on and tailor-made services--from overall logistics consultation, routing selection, airline preferences to shipment updates, we ensure our customer gets their shipment on a timely manner and with the least hassle.

Project 2: Major Drilling Mongolia

Dated from April 2007 - present

Major Drilling entrusted DAS to pick up 3 containers from Kunming, Yunnan Province to Mongolia via land transportation through China border Erlianhuut. DAS is responsible for the work all the way to Ulan Bator, Mongolia including export and import declaration. Other than regular land transportation from China to Ulan Bator, DAS has assisted Major Drilling Mongolia to transship 1*40'FR Drill Rig from The United States to Mongolia via Tianjin port. After transshipment declaration was done in Tianjin, the Drill Rig was immediately delivered to the border Erlianhuut. Thanks to our longterm relationship with the officers at the border, we have successfully hauled the container to UB directly after only 6 days of detention. Without a good relationship with the officers at the border, the container could have been expected to stay at the border 30 days or more due to the serious congestion at the border on the side of Mongolia.
